

List the fully implemented and unit/integration tested user stories in your project up to now that have GUI as well.

Implemented User Stories (with GUI)		
User Stories	Main Developer	Testing
Classroom (student + teacher dashboard)	Timothee	Elvis
Display Student Information + Modify student information	Tyronne + Elvis	Sean
Enter Grades And Transcript	Nathan	Tyronne
Login Logout	Sean	Nathan
Home Page	Tyronne	Timothee

Bug Report - Sean	
Problem Summary	When entering the student dashboard, the student information for first name and courses “flicker” before being updated.
Report Type	Coding/API call issue
Can Reproduce	Yes
Severity	Low
Suggested Fix	It seems like while the API call is being made, the dashboard uses some default info before updating. Maybe add some sort of loading screen or element to prevent this. Perhaps cache info so API calls aren’t made every time you go to the dashboard.

Bug Report - Nathan	
Problem Summary	With a pre-existing account, if you do not have the option for password recovery if you forgot your password unless you go to the administration page.
Report Type	Design issue
Can Reproduce	Yes
Severity	Small (Varies)
Suggested Fix	This is a double-edged sword as it provides a secure security measure,

	but does not make it easier for the users to login if they forgot their password. As such, the solution is either to leave it be or allow the users to change their passwords.
--	--

Bug Report - Nathan	
Problem Summary	When making a new account, you can put any email address because there is no email confirmation, so it can be falsified/fake.
Report Type	Design issue
Can Reproduce	Yes
Severity	High
Suggested Fix	This can be an issue because there could be security issues with a flood of fake accounts to the classroom creating more latency and loading problems/crashes. As such, there should be an email confirmation that is sent to the emails inputted.
